**Phosphorus samples at CLR-0 are taken at secchi depth. Phosphorus samples at all other sites are taken near surface**

Site Location	Coliform	E. Coli
CLR-0 Middle of lake (deep water test)	Ontario Standard < 1,000 counts/100 ml	< 200 counts/100 ml
CLR-2 NW end of lake (Big Bay/Resort area)	MLA Standard < 300 counts/100 ml	< 50 counts/100 ml
CLR-5 Little Bay area (Ridge Rd./Little Bay Rd)	* OLD Phosphorus Threshold was 4.79 ug/l as per District of Muskoka Official Plan (changed in 2021 to threshold of 20 ug/l)	
CLR-8 Last bay on Ridge Rd. before Camp Pine Crest	CFU (colony forming unit)	ug/l (micrograms per litre)
CLR-9 Clear Lake Rd. east of launch ramp		

**\* Provincial Water Quality Phosphorus Monitoring Threshold for Protection Against Aesthetic Deterioration (10 ug/L) and Nuisance Algal Growth (20 ug/L) \***

**PHOSPHORUS SOURCES**

Up to 75% occurs naturally, remainder is human influence ie. detergents, fertilizers, phosphorus leaching from septic

**TOTAL COLIFORM BACTERIA**

Total coliform bacteria are a group of bacteria found in high numbers in both human and animal intestinal wastes and therefore are found in water that has been contaminated with fecal material. Unfortunately, bacteria with the biochemical characteristics of total coliforms are also found in non-contaminated water. Thus, in the absence of fecal coliforms, the presence of total coliforms may indicate older fecal contamination or the presence of decaying organic matter. Although the total coliform bacteria group is a less reliable indicator of sewage contamination, because of its superior survival characteristics, it is preferred as an indicator of treatment adequacy in drinking water supply systems **For Drinking water coliform count must be 0.**

**FECAL COLIFORMS (E. COLI)**

Fecal coliform bacteria are a subset of the total coliform bacterial group and also are found in human and animal intestinal wastes. However, they are a more precise indicator of the presence of sewage contamination than total coliforms. The fecal coliform bacteria group includes the genera Escherichia and, to a lesser extent, Klebsiella and Enterobacter.

**For Drinking water E. Coli count must be 0.**
